

Quick filters on the analytics dashboard

Problem statement

Analysts open the dashboard and immediately filter to last 30 days, top customers, and a single product line. Six clicks today.

Goals

- Cut filter setup from 6 clicks to 1.
- Preserve last-used filter set across sessions.

Scope

- One-click filter chips at the top of the dashboard.
- Persisted last-used set per user.

Success metrics

- 80% of analysts apply a saved filter within 2 weeks.
- Median time to first filtered view drops from 18s to 4s.
